

Technology Board Report

September 2011

Cindy Johann

Tickets

We closed 261 tickets between August 17th and September 15.

Cameras

The new camera security system is complete at Cartmell. The picture quality is beautiful.

Map Testing

Installing Map was a big project this past month. Leah Spencer and Lynn Stucker were a huge help at Winn. They installed it on most of the machines there.

TMG

Threat Management Gateway is the new filter server for our district. It replaces the ISA server. This server allows us to shut down inappropriate sites that students are allowed to go to on the internet and allows us to create logs to check the sites students and staff have visited. There will be a tiny adjustment in the district with this new system. New filter servers like to block too much and we have to go in and create white list – a list of sites that we tell the server is ok for the staff and students to visit.

Erate

We have already received our Funding Decision Commitment letter for AT&T Local and Long Distance phone bills and Insight Internet bills at 90% for the funding year of July 2011- June 2012.

Upcoming Technology moves:

- The state will be upgrading our KEN cabinet in October. Our network will be down around 3 hours.
- The Munis upgrade will occur in December.
